

MAG ONE DUO

- Provides system protection for heating systems using a boiler up to 36kW in heating output and heat pump systems up to 10kW heating output – for larger systems, two Mag One DUO filters can be fitted in a parallel circuit
- Uses a 12,000 gauss neodymium magnet designed to effectively capture magnetic debris and a 500-micron mesh gauze to capture non-ferrous debris circulating in a heating system
- Suitable for installation with traditional boilers, including oil and gas boilers, as well as renewable energy systems such as an air source heat pump
- Excellent filtration performance which can not only improve a heating system's lifespan but also its overall effectiveness.

Part Code	Description
VM01DUO	Mag One DUO filter
VM04DUO	Mag One DUO fill & flush kit
