A homeowner's checklist for a heat pump and underfloor heating system installation

- [ ] Can I use my existing radiators with a new heat pump heating system?
- [ ] What type of wet underfloor heating system will be best for my home?
- [ ] What is the heat loss of my property and can we improve our levels of insulation?
- [ ] What size heat pump will we need?
- [ ] Can we install underfloor heating and radiators with a heat pump?
- [ ] Can we lay underfloor heating on our existing floors?
- [ ] What type of floor covering will work best with underfloor heating?
- [ ] How long will it take to install a new heat pump and underfloor heating system?
- [ ] What guarantee can I get on my heat pump?
- [ ] Am I eligible to claim government funding for a new air source heat pump installation?
- [ ] Will we need planning permission to install a heat pump?
- [ ] How will a heat pump heat my home and how does it differ to a conventional boiler?
- [ ] Where is the best place to position our heat pump?
- [ ] How much will it cost to run and maintain a heat pump heating system?
- [ ] Will I need a separate hot water cylinder?
